

LEMING LAKE SAND SECTION PROJECT

Proudly connecting Alberta to the energy you need

Built to ensure ongoing safe and reliable energy delivery, TC Energy's NGTL System delivers energy to millions of North Americans every day as an essential part of the TC Energy pipeline network.

To meet the oilsands' growing energy demand, we are investing in the Leming Lake Sales Lateral Loop (Sand Section) Project.

The Canada Energy Regulator (CER) approved this natural gas pipeline expansion project on our NGTL System in northern Alberta in August 2025. The project has an anticipated in-service date of Q2 2026.

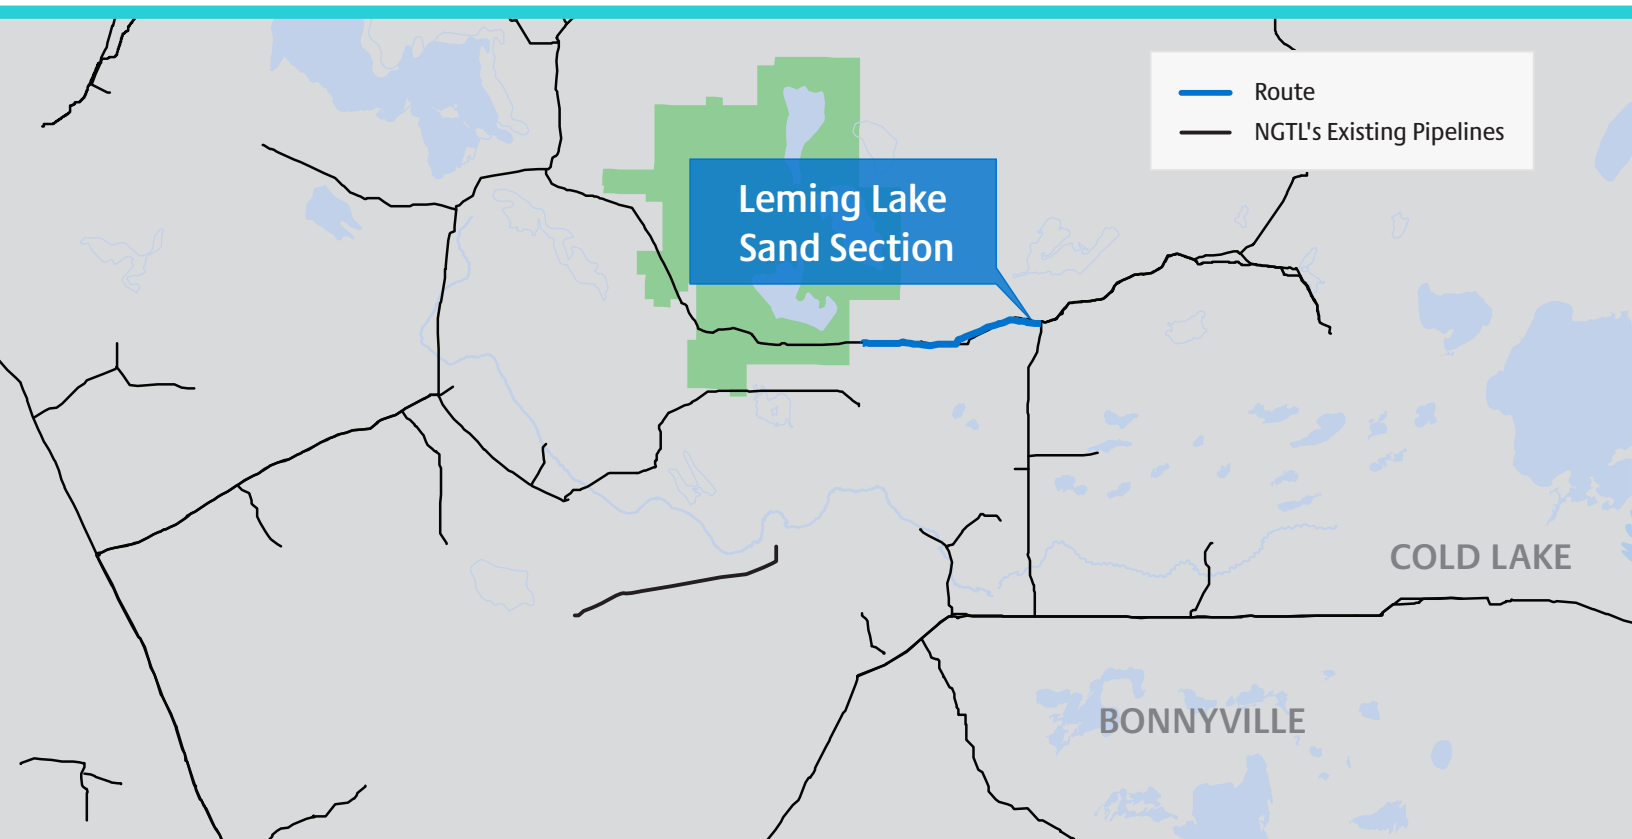

Sand section

The Sand Section consists of approximately 18 kilometers (km) of 20-inch diameter (NPS 20) located on Crown Land approximately 60 km northwest of Bonnyville, in the M.D. of Bonnyville No. 87.

Anticipated Project Schedule

Q3 2024	Engagement start
Oct. 2024	Project notification submission to CER
Jan. 2025	Section 214 Application filed with the CER
Aug. 2025	CER approval
Q4 2025	Clearing work and anticipated construction start
Q2 2026	Anticipated project in-service

..... TC Energy periodically provides information beginning at the early stages of project development, including prospecting, and continuing throughout the life of assets. The information provided is intended to inform stakeholders and Indigenous groups of our proposed activities and provide the opportunity to provide meaningful input or feedback. As planning progresses and new information becomes available, details may change from the time of this printing.

Project Benefits

The Project will deliver well-designed and constructed infrastructure that provides short- and long-term economic benefits and also strengthen the economy at a local, provincial and national level:

Employment opportunities - Construction will require the services of equipment operators, welders, mechanics, truck drivers, labourers and more.

Business opportunities - Pipeline construction will create demand for local goods and services, including food and accommodation, hardware, industrial parts, automotive parts and servicing, fuel and more.

Investment in local communities - Through our engagement with local communities, we will identify areas where we can help build stronger, more vibrant communities through initiatives with community partnerships in the areas of safety, community and environment.

Annual revenue to support local services - Project construction will result in tax payments to municipal, provincial and federal governments. When the Project is operational, annual tax payments will help support schools and hospitals, emergency services, recreation facilities, recycling programs and other local programs vital to sustaining communities.
